**L-Acoustics – Kiva II will come to the market in end of 2016!**

- 138 dB of peak SPL (+ 6 dB SPL vs. Kiva)
- Compact footprint, low weight
- High amplifier density (16 ohms)
- Smooth 100° horizontal polar response (K grill)
- 15° inter-element vertical flexibility
- Multiple rigging accessories
- Sturdy cabinet
- RAL CLASSIC, IP43 rating

### POWER IS BEAUTIFUL

Kiva II is a new ultra-compact modular line source, adding 6dB of max SPL versus its predecessor, maximized amplifier density with 16-ohm impedance, and a new sturdy cabinet.

Despite its ultra-compact format, the Kiva II features L-Acoustics' Wavefront Sculpture Technology™ (WST), giving it a long throw capability and delivering even SPL from the front row to the back of the audience. Its coplanar transducer arrangement and new K front grill generate a symmetric horizontal coverage of 100 degrees without secondary lobes over the entire frequency range.

Weighing only 31 pounds (14 kg), the product's elegant lines and flush-fitted rigging allow it to melt into any architecture, making it a natural fit for installations in Performing Arts Centers and special events demanding minimum visual obtrusion, and particularly in L-ISA™ multi-channel configuration installations.

*"Our new Kiva II keeps the elegance of its predecessor, but that's where the comparison ends. Delivering an extra 6dB, the new model offers an impressive peak SPL of 138dB. With only a '1.5dB' price increase, Kiva II is now the SPL-to-size ratio benchmark in its format category.*

*Beside the whopping SPL, we also bring reinforced weather resistance, a rigging visual safety check, and new rigging accessories to expand the range of applications."*

Cédric Montrezor,  
Director of application, Installation at L-Acoustics
